

herpatch serum

PRODUCT:

The Herpatch Serum is a innovative and effective way to treat rapidly fever blister symptoms. The Herpatch Serum can be applied easily on the fever blister with the tube. After a few minutes the white serum forms a protective and transparent film over the blister and together with the ingredients it helps to speed up the healing process. Herpatch Serum treats your fever blister symptoms in every stage of the outbreak. The Herpatch Serum can be used as stand-alone treatment or complementary with the Herpatch Remesense patches.

TECHNOLOGY:

The Herpatch Serum is based on the targeted liquefied film technology. Upon application, it will form a transparent thin but strong solid barrier over the affected area which allows it to create an ideal micro-environment. This liquefied film technology is based on acrylates copolymers, PVA and beta-glucan which are strong film-forming agents. Those ingredients will create a strong, instant protective barrier which will cover the wound, caused by the HS virus. Its benefits include: visibility of wound margins, reduction of erythema, pain control and patient comfort.

Besides film-forming ingredients a number of other substances have been incorporated in the serum. These substances are identical as for the Herpatch Remesense patches.

First of all,

- beta-glucan, aside its property as film-forming agent, it is also known to soothe, protect and hydrate the skin. This will help to improve wound healing.
- the sulfated polysaccharides derived from a red microalgae help to protect against sunlight exposure and also have protective moisturizing properties for the skin matrix.
- zinc sulphate has an astringent action, which firms, tones and strenghtens the layers of the skin.

FEATURES:

- Easy application
- Serum with active properties
- Forms transparent, liquid patch
- Fastens healing
- Soothes burning and itching
- Treats every stage of the outbreak
- Relieves pain and burning
- Helps to protect against sunlight exposure
- Speeds up the healing process
- Reduces redness, swelling and blistering
- Helps to prevent itching and scabbing
- Helps to minimize contamination risk
- Firms, tones and strenghtens the skin

CONTENT:

1 x 5ml Herpatch serum

INGREDIENTS:

Water, alcohol denat., styrene/acrylate copolymer, polyvinylalcohol, glycerin, beta-glucan, porphyridium polysaccharide, zinc sulphate.
